

My Safe Website Design & Animations

Basically the website should follow the smooth animations for transitions of screens. Follow the scroll animations for the website by layer by layer. Here are some for the inspirations.

Home Page

Here on Overview of products, this should have a waveform vertical transition, so that the user able to go back and forth to check all the products. It should have smooth transition of wave design.

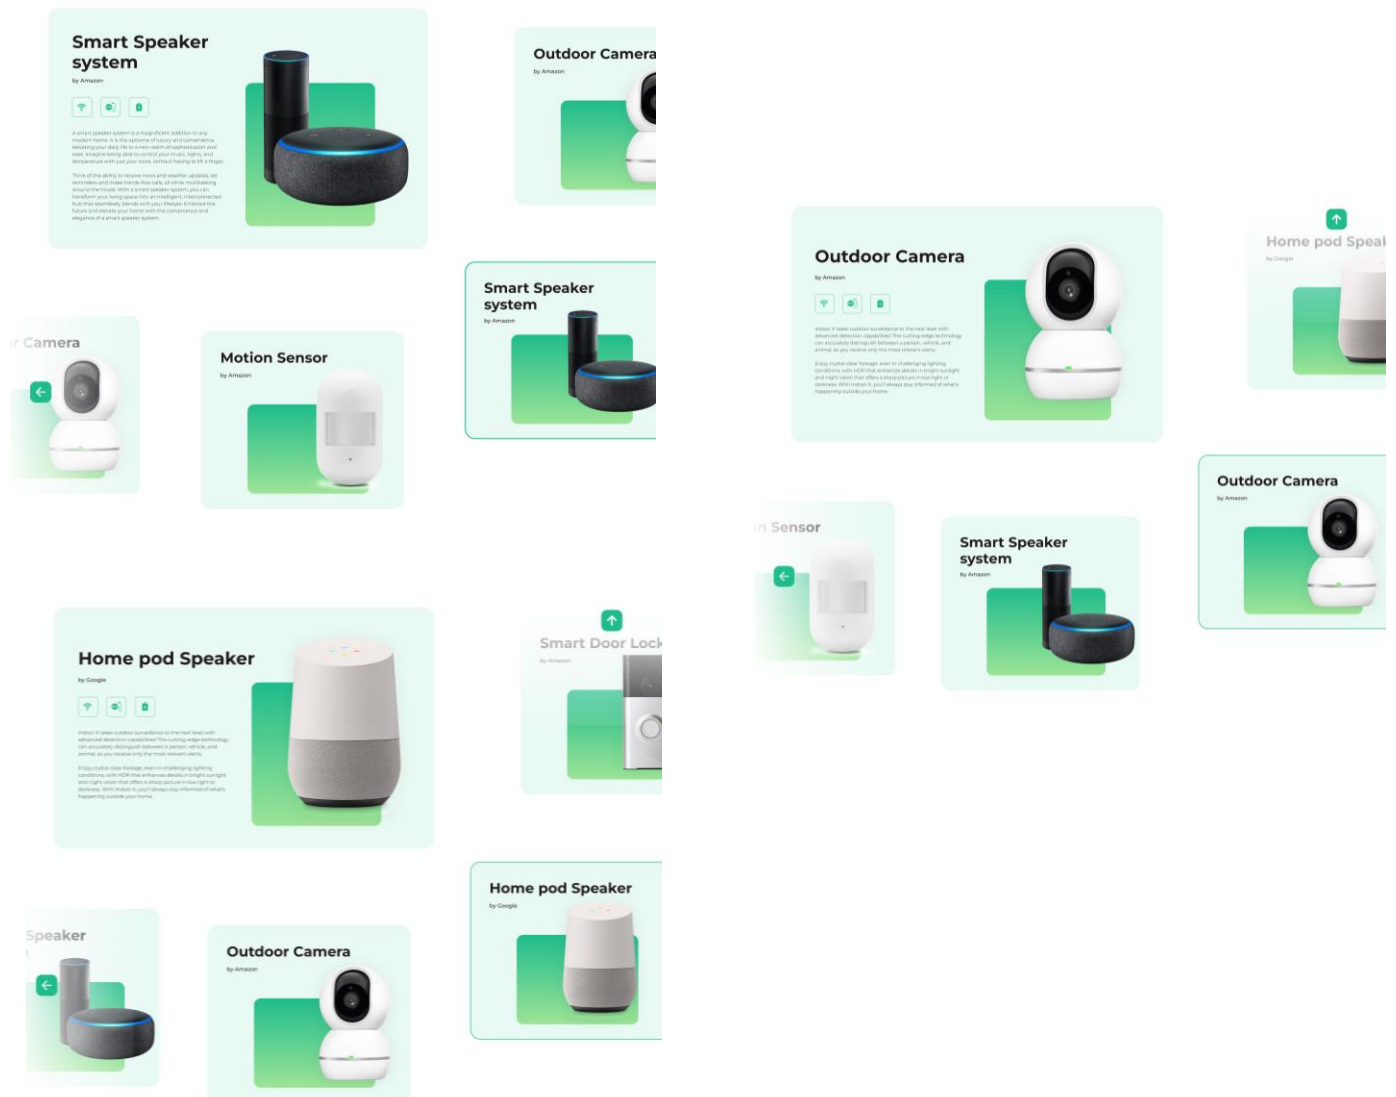

About Us Page

This should have smooth animations on layers as shown in reference designs.

Products & Services Page

User should be able to scroll all the products on a 'wheel –type 'transition of the page. Selected product will display the details on preview layout. User should have the ability to check all by scrolling as wheel animation design.

Rest of the pages

Make animations on layers as shown in reference designs
